THE COMPETITOR'S CLIENT BRIEF

BRAND & BUILD

× يوزرسيف MAKE IT. SHOW IT.

A BRAND THAT CONNECTS.
A WEBSITE THAT DELIVERS.

Keep the brand recognisable. Show its work. Help customers turn an idea into a complete request that the owner can approve or reject.

Visual identity · Two social media designs · A working website

Published client cover artwork [2]. This brief uses the event identity and client assets; teams are free to create their own solution within the requirements.

01 / THE CLIENT & THE CHALLENGE

MEET THE BUSINESS.

يوزرسيف is an Aswan printing and personalisation business. Its posts connect custom products with personal expression, design quality and the experience of receiving the finished item. [1, 4]

Services shown on its official page

- Printed T-shirts, hoodies and sweatshirts.
- Caps, stickers and labels.
- Mugs and promotional gifts.
- Phone cases and custom designs.

This is a published service list [3], not a confirmed inventory. The website should support the full catalogue and portfolio approved by the client.

The business goal

Move the request details out of scattered conversations and into one organised website journey. Customers should explain what they need, provide the right information and see what happens next.

Confirm the active contact before launch.

Fig. 1 / Official promotional graphic [3], labelled as AI content on Facebook. It illustrates the published offer, not proof of every pictured product.

YOUR ASSIGNMENT

01 / Brand

Keep the original colours. Refine or develop the logo if useful. Create two social media designs.

02 / Website

Present the services and portfolio in a clear, distinctive website that follows the client identity.

03 / Request flow

Collect a complete customer request, support direct communication and give the owner a clear admin dashboard.

How to read this brief: “Client requirement” identifies the supplied brief. “Suggested approach” and “Optional idea” explain possible solutions. They are not extra competition rules.

02 / VISUAL IDENTITY

KEEP THE BRAND. IMPROVE ITS USE.

The website and social designs must feel like يوزرسيف. The blue and orange used to frame this document belong to Brand & Build; they are not a replacement client palette.

Client requirement

Preserve the original colours

Keep the complete original palette using approved colour values. Do not replace it with a new palette or reduce the instruction to one colour.

Logo development is allowed

A simple refinement is acceptable, and further development is possible if needed. Explain the improvement and show that the result still belongs to the brand.

Make the identity work on screen

Use consistent type, colour, spacing, buttons and image treatment. Check that the logo is readable at small sizes and the interface is easy to use.

Fig. 2 / Published client logo [2]. Obtain the original logo files and colour values before final production.

TWO SOCIAL MEDIA DESIGNS

01

Design one

Suggested direction: introduce a service or showcase a group of products. Use one clear message, suitable imagery and a useful call to action.

02

Design two

Suggested direction: invite customers to personalise a product or start a request on the website. Connect the visual identity to the service experience.

Keep the creative freedom

Two designs are required; these themes are suggestions. Choose your own concepts. If you change the logo, include the original, your version and a short explanation.

03 / WEBSITE STRUCTURE

EVERY PAGE NEEDS A JOB.

This suggested page plan covers the customer journey and the website basics. Pages may be combined or split if the result stays easy to understand.

Suggested approach

Discover → Explore work → Send a request → Track it

Page / view	Purpose and essential content
Home	Explain the business, highlight services and work, show how ordering works and provide a clear “Start a request” button.
About	Describe what the business does and how it handles custom work. Use real information; avoid invented history or statistics.
Services + details	Organise every approved service. Each detail view should show images, available options, information needed and a request button.
Portfolio	Organise the client’s work by category. Let visitors view images clearly and use a project as a reference for a new request.
Start a request	Guide customers through product choice, specifications, artwork, contact details and a final summary.
Track a request	Show the decision, current status, notes and the next action. Protect access to each customer’s information.
Contact + help	Show approved contact channels and useful FAQs. Include a simple enquiry route for people who are not ready to order.
Policies + admin	Make approved privacy and order policies accessible. Keep the owner’s dashboard in a separate, protected area.

Always-visible basics

A logo linking home, simple navigation, a prominent request button and a footer with approved contact details, social links and policy links. Add the exact address, map, email and opening hours only when confirmed.

04 / CUSTOMER JOURNEY

FROM AN IDEA TO A COMPLETE REQUEST.

The central requirement is simple: collect and organise everything the customer needs on the website, so the owner can review the request and approve or reject it.

Client requirement: end-to-end requests | **Steps below are suggested**

01

Choose

Start from a service, a portfolio example or a custom idea.

02

Specify

Set quantities and options such as size, colour and print position.

03

Add artwork

Upload artwork or references, or ask for design help.

04

Review & send

Check the editable summary, contact details and preferred receipt method.

05

Owner decides

Review one complete request, then approve or reject it.

06

Follow through

See the decision, next action and progress until completion.

ASK THE RIGHT QUESTIONS

Every request	Service, quantity, description, name, phone/email, desired date, artwork needs and receipt preference.
Clothing / caps	Product, colour, relevant size breakdown and print placement. Quantities should add up correctly.
Gifts / phone cases	Product type, personalisation text and the phone model when relevant. Do not show clothing-size fields.
Stickers / labels	Dimensions with units, shape, quantity and intended use, plus the options the client actually offers.

Before the customer presses Send

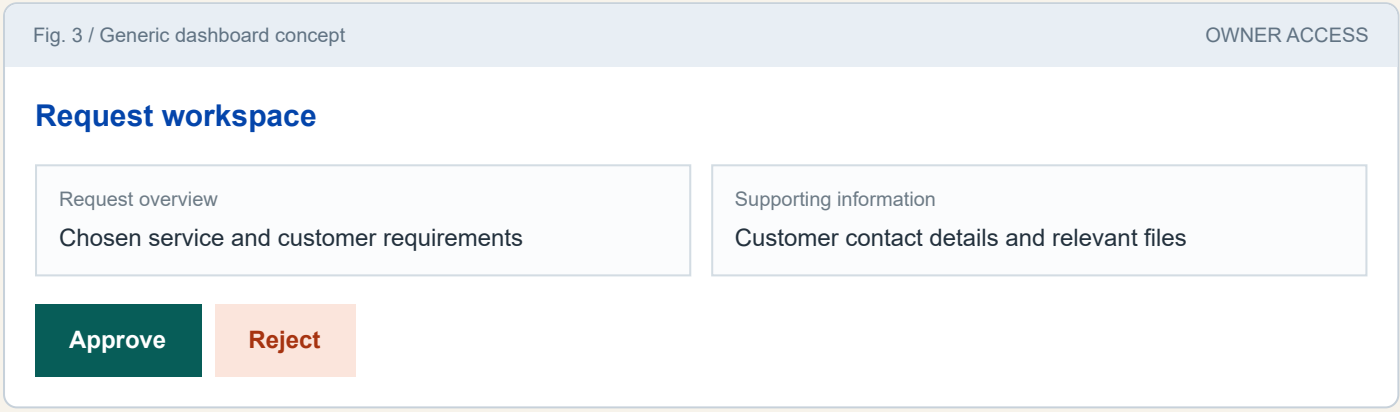

Show an editable summary and attachments, and explain missing details. Issue a request number after sending. The desired date is a request, not a delivery promise.

05 / ADMIN & FULFILMENT

ONE REQUEST. ONE CLEAR DECISION.

Give the owner a simple way to review requests and communicate with customers. Teams decide how the dashboard looks and works.

Client requirement

A generic illustration. Teams choose the layout, fields and workflow.

Manage requests

Search requests, inspect files, record decisions and keep a dated update history.

Manage the business content

Update services, options, portfolio images and contact details without changing code.

Keep the customer informed

Show the decision, explain the next step and make follow-up easy. Keep messages and progress updates connected to the request.

Confirm pricing, payment and delivery arrangements with the client before launch (page 10).

06 / THE DISTINCTIVE FEATURE

MAKE ONE USEFUL THING STAND OUT.

The client asks for a distinctive feature that adds real value. Choose a problem in the business or customer journey and show how your feature solves it.

Client requirement: a useful distinctive feature | **Example below is optional**

Optional idea: a request-readiness assistant

Flag missing or inconsistent specifications before sending. Simple rules are enough.

Fig. 4 / Request-readiness example — DEMO

Your request is nearly ready.

Check	Result
Product and quantity	Complete
Size breakdown	Matches the total
Artwork	Attached
Print position	Choose a position to continue

A completeness check does not guarantee print suitability or exact final colours.

The problem

Missing specifications create extra messages and delay the owner’s decision.

The solution

Ask relevant questions and flag missing or inconsistent information.

The proof

Show an incomplete request, help the customer fix it and deliver a clear final summary.

Use motion with a purpose

GIFs or animated visuals are a client requirement. Use them to show a product, a customisation step or the making process. Keep them lightweight and provide a suitable static or reduced-motion alternative.

07 / WEBSITE ESSENTIALS

MAKE THE WHOLE EXPERIENCE WORK.

Keep the website easy to use, reliable and suitable for the client’s customers.

Suggested quality baseline

Works on mobile

Make pages, menus and forms easy to use on a phone.

Clear and accessible

Use readable text, clear navigation and appropriate Arabic / RTL support.

Fast and reliable

Optimise images and show helpful loading, success and error messages.

Safe and accurate

Protect the dashboard and customer files. Use approved business and contact details.

CONTENT THAT BELONGS TO THE CLIENT

Use approved service information and properly sourced portfolio images.

Label demo content clearly and obtain permission before publishing customer artwork or personal information.

Fig. 5 / T-shirt image published in the client’s portfolio [4].

08 / HANDOVER & FINAL CHECK

SHOW A COMPLETE SOLUTION.

The client outputs are the visual identity work, two social designs and the website. The handover format below is suggested; official event submission instructions take priority.

Brand files

Original and developed logo if applicable, colour references, typography and the two social designs. Include editable and exported files.

Website files

A working demo, source files, setup notes and a safe way to access the demo dashboard.

Short walkthrough

Discover a product, submit a request, decide in admin and show the customer's next step. Demonstrate the distinctive feature.

CLIENT REQUIREMENTS: COVERAGE CHECK

Client requirement / permission	What to show	Pages
Original brand colours preserved	Colour references and consistent applications.	03
Logo refinement / development permitted	Keep the original, or explain any development.	03
Two social media designs	Two finished, consistent creative pieces.	03
Website follows the visual identity	Coherent pages, components and imagery.	03–04
Full range of work displayed	Organised services and portfolio content.	02, 04
Clear admin dashboard	A request visible with its details and decision.	06
GIFs or animated visuals	Purposeful motion in the website.	07
A distinctive feature with value	A working example and its business benefit.	07
Direct customer communication	A clear conversation route linked to requests.	06
Visible contact methods	Working, approved contact channels.	02, 04
Requests handled from A to Z	Complete request → decision → next steps.	05–06

Test four things before presenting

1. A complete request reaches admin. 2. Missing or inconsistent details are caught. 3. Approval and rejection appear correctly for the customer. 4. Customer files and request access stay private.

09 / SOURCES & CLIENT CONFIRMATIONS

BUILD ON REAL INFORMATION.

The following official-page material was reviewed on 22 October 2026. Links are clickable. Client requirements come from the organiser's supplied brief and clarifications.

[1] Official company page

Arabic name, printing-service category, Aswan location and published contact channel.

Open the official page ↗

[2] Published identity assets

The original logo and cover artwork used in this document.

Logo image ↗ · Cover artwork ↗

[3] Published service announcement

Clothing, caps, stickers, mugs, promotional gifts, phone cases and custom designs. The promotional image carries an AI-content label on Facebook.

Service announcement ↗

[4] T-shirt project and portfolio images

Shows the brand's focus on personalisation and work from design preparation through delivery.

Portfolio post ↗

CONFIRM BEFORE REAL-WORLD LAUNCH

Brand assets	Original logo files, official colour values and any approved language versions. The English company spelling is not confirmed.
Catalogue	Complete service list, available products, materials, options and artwork specifications.
Commercial rules	Prices or quotation rules, payment methods, deposit requirements, lead times and revision / cancellation terms.
Fulfilment and contact	Collection or delivery options, coverage, fees, active contact details, exact address, email and approved policies.

> **Keep the distinction clear**
>
> Do not invent business facts to fill a gap. Use clearly labelled demo data, document your assumptions and explain which integrations or client decisions are needed for production. An unconfirmed option is not automatically excluded.
