Brand & Build × يوزرسيف

Project Documentation – Visual Identity, Social Designs and Website

IEEE Aswan Student Branch · Competition: Graphic Design × Web Development · Brief dated 22 Oct 2026

Team name: [TEAM TO FILL] · Track: [Graphic Design / Web Development] · Members: [TEAM TO FILL]

Main Requirements (What the Client Asked For)

The client (يوزرسيف, an Aswan printing and personalisation business) requires eight things. Anything marked "Suggested" or "Optional" in the brief is not a rule.

1. **Brand identity:** keep the complete original colour palette. Logo refinement is allowed, but show the original, our version and a short explanation.
2. **Two social media designs:** two finished, consistent pieces with their own concepts.
3. **A working website:** presents all services and the portfolio, and follows the client identity (Arabic / RTL support, mobile friendly).
4. **End-to-end request flow:** the customer sends one complete request (service, quantity, specifications, artwork, contact details, desired date, receipt preference) with an editable summary and a request number after sending.
5. **Admin dashboard:** the owner searches requests, inspects files, approves or rejects, keeps a dated update history, and manages services, options, portfolio and contact details without changing code.
6. **Direct customer communication:** messages and progress updates connected to each request, so the customer sees the decision and next step.
7. **One distinctive feature with real value:** it solves a problem in the business or customer journey (the request-readiness assistant is only an example).
8. **GIFs or animated visuals with a purpose:** lightweight, with a static or reduced-motion alternative. Visible, approved contact methods are also required.

Do not invent business facts. Addresses, emails, prices, history and statistics that are not confirmed must be labelled demo data or listed as assumptions. The blue and orange in the brief belong to Brand & Build, not to the client.

What We Deliver

Three outputs, handed over in the format of the official event submission instructions (these take priority over the list below).

1. Brand files

- [ ] Original logo and developed logo (if any), with a short explanation
- [ ] Colour references and typography
- [ ] Two social media designs, exported (PNG) and editable source files

2. Website files

- [ ] Working demo (live link)
- [ ] Source files and setup notes
- [ ] A safe way to access the demo admin dashboard
- [ ] This documentation

3. Short walkthrough

- [ ] Discover a product, submit a request, decide in admin, show the customer's next step
- [ ] Demonstrate the distinctive feature

Test before presenting: a complete request reaches admin; missing or inconsistent details are caught; approval and rejection show correctly for the customer; customer files and request access stay private.

The sections below hold the detail behind each point: timeline, coverage check, brand, website, request flow, admin, feature, tests and handover.

Agreed Team Decisions

Decisions made in the planning discussion. Items marked (assumed) were not confirmed and can be changed.

Area	Decision
Team	3 people: React frontend, Node.js backend, AI (RAG chat, Telegram bot)
Backend and database	Node.js with MongoDB
Language	Arabic only (RTL)
Customer accounts	Required before ordering (Amazon style). Email and password, plus Google Login. "My orders" page with status timeline
Admin access	One owner account, email and password (JWT)
Order statuses	Submitted, Under review, Approved, Rejected, In progress, Ready, Completed

Area	Decision
File uploads	Server disk folder, served only through an authenticated route so files stay private
AI model	Free model through OpenRouter, or a Gemini key if it works. Provider and key set in environment variables, backend only
RAG chat	Reads the current page content (sent by the frontend) and live site content from MongoDB. Answers only from what it finds and says it is not sure otherwise
Chat starts an order	Fills the visible form fields; the customer reviews, edits and sends
Distinctive feature	Request-readiness assistant (simple rules) plus the RAG chat
Telegram bot	Webhook. Welcome message on first activation and order status notifications, linked to the customer account. Periodic offers and RAG inside Telegram are postponed
Customer to owner communication	No in-app chat. WhatsApp button with a prefilled message containing the request number (assumed, to cover the brief's direct communication requirement)
Portfolio and service images	Published client images, plus clearly labelled Demo placeholders
Demo hosting	Local machine; Cloudflare Tunnel or ngrok for the Telegram webhook; backup walkthrough video

More agreed decisions

- Website pages follow the brief's suggested plan: Home, About, Services (with details), Portfolio, Start a request, Track a request, Contact and FAQ, Policies, Admin.
- Sticker and label request fields: width and height with unit (cm or mm), shape (rectangle, circle, custom cut), quantity, intended use.
- Admin can add, edit and delete services, options, portfolio images and contact details without changing code.
- Customers link Telegram from an account page button that opens the bot with a temporary code.

- Allowed design files: PNG, JPG and PDF, up to 10 MB per file and 5 files per request.
- The API contract between frontend and backend is agreed directly between the two developers.
- The RAG chat answers only about يوزرسيف and its services and refuses any other topic.
- Google Login is optional: start with email and password, add Google (needs a Google Cloud OAuth client with localhost allowed) only if time allows.
- Logo variants and the two social designs are produced with Claude's help, built around the original logo file supplied by the team (the calligraphic logo is not redrawn). Product photos come from published client material or are labelled Demo.

1. Executive Summary

يوزرسيف is an Aswan printing and personalisation business. Its published services include printed T-shirts, hoodies and sweatshirts, caps, stickers and labels, mugs and promotional gifts, phone cases and custom designs. The business goal set in the brief is to move request details out of scattered conversations and into one organised website journey, where customers explain what they need, provide the right information and see what happens next, and the owner can approve or reject each complete request.

This document records what we built, why we made each decision, how to run it, and how it maps to the client requirements.

2. Competition Timeline

Day 1

- 09:00–10:00 Registration
- 10:00–11:00 Opening and sponsor briefing (rules, sponsor business and requirements)
- 11:00–12:00 Technical sessions (Graphic Design and Web Development in parallel)
- 12:00–12:30 Break and lunch
- 12:30–13:00 Team forming and networking
- 13:00–17:00 Competition Sprint: development and mentorship

Day 2

- 09:00–09:30 Registration and check-in
- 09:30–12:00 Competition Sprint I
- 12:00–12:30 Break
- 12:30–14:00 Competition Sprint II

- 14:00–14:30 Summation, testing and submission
- 14:30–16:00 Judging
- 16:00–17:00 Awards and closing

Submission closes at 14:30 on Day 2. Official event submission instructions take priority over the handover format in this document.

3. Client Requirements and Coverage Check

The brief separates **client requirements** from **suggested approaches** and **optional ideas**. Only the first group is mandatory.

Client requirement	What we show	Brief page	Status	Where in this doc
Original brand colours preserved	Colour references and consistent use	03	[ ]	Section 4
Logo refinement permitted	Original kept, or development explained	03	[ ]	Section 4
Two social media designs	Two finished, consistent pieces	03	[ ]	Section 4
Website follows the visual identity	Coherent pages, components, imagery	03–04	[ ]	Section 5
Full range of work displayed	Organised services and portfolio	02, 04	[ ]	Section 5
Clear admin dashboard	A request visible with details and decision	06	[ ]	Section 7
GIFs or animated visuals	Purposeful motion in the website	07	[ ]	Section 8
A distinctive feature with value	Working example and business benefit	07	[ ]	Section 8
Direct customer communication	Conversation route linked to requests	06	[ ]	Section 7
Visible contact methods	Working, approved channels	02, 04	[ ]	Section 5
Requests handled from A to Z	Complete request, decision, next steps	05–06	[ ]	Sections 6 and 7

4. Brand and Visual Identity

4.1 Principles from the brief

- Keep the **complete original palette** using approved colour values. Do not replace it with a new palette or reduce it to one colour.
- The blue and orange used in the brief document belong to Brand & Build, not to the client.
- Logo refinement is allowed. If changed, include the original, our version and a short explanation.

- Use consistent type, colour, spacing, buttons and image treatment. The logo must stay readable at small sizes.

4.2 Colour palette

The published client artwork is built around a deep green background with white calligraphic lettering and warm accent tones. Exact values must be taken from the original files.

Role	Name	HEX	Source
Primary	[TEAM TO FILL]	[#_____]	Sampled from published logo
Secondary	[TEAM TO FILL]	[#_____]	Sampled from published logo
Accent	[TEAM TO FILL]	[#_____]	Sampled from published artwork
Neutral light	[TEAM TO FILL]	[#_____]	
Neutral dark	[TEAM TO FILL]	[#_____]	

> Note: values above are sampled from published images, not official brand values. Official colour values must be confirmed with the client before production.

4.3 Typography

- Arabic display / headings: [TEAM TO FILL]
- Arabic body: [TEAM TO FILL]
- Latin headings and body (for English UI): [TEAM TO FILL]
- Rationale: [TEAM TO FILL]

4.4 Logo

- **Original logo:** included unchanged in the handover.
- **Developed version (if any):** [describe the refinement, for example cleaner edges, simplified version for small sizes, single-colour variant]
- **Why it still belongs to the brand:** [TEAM TO FILL]
- **Small-size check:** minimum readable size on screen [__ px]; favicon/avatar version [yes/no].

4.5 Two social media designs

	Design 1	Design 2
Concept	[Introduce a service or showcase a group of products]	[Invite customers to personalise a product or start a request]
Single message	[TEAM TO FILL]	[TEAM TO FILL]
Imagery used	[source and permission]	[source and permission]
Call to action	[TEAM TO FILL]	[TEAM TO FILL]
Format / size	[e.g. 1080×1350]	[e.g. 1080×1350]
Files	PNG export + editable source	PNG export + editable source

The suggested themes in the brief are suggestions only. We chose our own concepts and explain them here: [TEAM TO FILL].

5. Website Structure

Customer journey: **Discover → Explore work → Send a request → Track it.**

Page / view	Purpose	Key content	Route
Home	Explain the business, highlight services and work, show how ordering works	Hero, services, featured work, how-it-works, "Start a request" button	`/`
About	What the business does and how it handles custom work	Real information only, no invented history or statistics	`/about`
Services + details	Every approved service	Images, available options, information needed, request button	`/services`, `/services/:id`
Portfolio	Client work by category	Clear image viewing, "use as reference" for a request	`/portfolio`

Page / view	Purpose	Key content	Route
Start a request	Guided request form	Product, specs, artwork, contact, final summary	`/request`
Track a request	Decision, status, notes, next action	Access protected per customer	`/track`
Contact + help	Approved contact channels, FAQs, simple enquiry route	WhatsApp, social links, enquiry form	`/contact`
Policies	Privacy and order policies	Approved text only	`/policies`
Admin	Owner dashboard	Separate, protected area	`/admin`

Pages may be combined or split; update the table above to match what was actually built.

Always visible: logo linking home, simple navigation, prominent request button, and a footer with approved contact details, social links and policy links. Address, map, email and opening hours are added only when confirmed.

Published contact channel: WhatsApp 01116891025 (as published; to be confirmed as active before launch).

6. Customer Request Flow

The central requirement is to collect and organise everything the customer needs so the owner can review one complete request and approve or reject it.

6.1 Steps

1. **Choose** – start from a service, a portfolio example, or a custom idea.
2. **Specify** – quantities and options such as size, colour and print position.
3. **Add artwork** – upload artwork or references, or ask for design help.
4. **Review and send** – editable summary, contact details, preferred receipt method.
5. **Owner decides** – approve or reject.
6. **Follow through** – customer sees the decision, next action and progress.

6.2 Fields by request type

Request type	Required fields
Every request	Service, quantity, description, name, phone/email, desired date, artwork needs, receipt preference
Clothing / caps	Product, colour, size breakdown (must add up to total quantity), print placement
Gifts / phone cases	Product type, personalisation text, phone model when relevant. No clothing-size fields
Stickers / labels	Dimensions with units, shape, quantity, intended use, and only options the client actually offers

6.3 Rules

- An editable summary and attachments are shown before sending; missing details are explained.
- A **request number** is issued after sending.
- The desired date is a request, not a delivery promise (wording shown to the customer).
- Request statuses: [e.g. Submitted, Under review, Approved, Rejected, In progress, Ready, Completed].

7. Admin Dashboard and Communication

7.1 Owner capabilities

- Search and filter requests.
- Open one request: chosen service, specifications, contact details, files.
- **Approve** or **Reject** with an optional reason and next step.
- Keep a dated update history per request.
- Message the customer inside the request thread (communication stays connected to the request).
- Manage content without changing code: services, options, portfolio images, contact details.

7.2 Access and security

- Admin area is separate and protected: [authentication method].

- Customer files and request pages are private: [access method, for example request number + phone/email verification or secret link].
- Demo credentials for judges: [provided separately and safely, not committed to the repository].

8. Distinctive Feature and Motion

8.1 Distinctive feature

Feature: [for example Request-readiness assistant]

- **Problem:** missing or inconsistent specifications cause extra messages and delay the owner's decision.
- **Solution:** ask relevant questions and flag missing or inconsistent information before sending, using simple rules.
- **Proof:** demo an incomplete request, show the customer fixing it, and deliver a clear final summary.

Check	Rule	Result shown to customer
Product and quantity	Both present, quantity greater than 0	Complete / Missing
Size breakdown	Sum of sizes equals total quantity	Matches the total / Mismatch of N
Artwork	File attached or "design help" selected	Attached / Needed
Print position	One position chosen for clothing and caps	Choose a position to continue

A completeness check does not guarantee print suitability or exact final colours, and the interface says so.

8.2 GIFs and animated visuals (client requirement)

- Where used: [product showcase / customisation step / making process].
- Format and size: [GIF / WebM / CSS animation, file size].
- Static or reduced-motion alternative: [implemented via `prefers-reduced-motion` or static fallback].

9. Quality Baseline

Area	What we did
Mobile	Responsive pages, menus and forms tested on phone sizes: [TEAM TO FILL]
Accessibility	Readable text, clear navigation, contrast checked: [TEAM TO FILL]
Arabic / RTL	RTL layout and Arabic typography supported: [TEAM TO FILL]
Performance	Optimised images, loading / success / error messages: [TEAM TO FILL]
Safety	Dashboard and customer files protected; approved contact details only

10. Content Sources and Honesty Notes

The brief says not to invent business facts. Our rules:

- Services shown follow the published service list. It is **not** a confirmed inventory.
- The promotional graphic on the official page is labelled as AI content; it illustrates the offer, not proof of every pictured product.
- Portfolio images come only from published client material, with source noted: [list]. Customer artwork and personal information are not published without permission.
- Anything we made up for the demo (sample requests, prices, options, names) is **clearly labelled as demo data**.
- No invented history, statistics, address, email or opening hours.

10.1 Assumptions

#	Assumption	Reason	Needs client confirmation
1	[TEAM TO FILL]		Yes / No
2	[TEAM TO FILL]		Yes / No

10.2 To confirm with the client before real-world launch

- **Brand assets:** original logo files, official colour values, approved language versions (English spelling of the company name is unconfirmed).
- **Catalogue:** full service list, products, materials, options, artwork specifications.
- **Commercial rules:** prices or quotation rules, payment methods, deposits, lead times, revision and cancellation terms.
- **Fulfilment and contact:** collection or delivery options, coverage, fees, active contact details, exact address, email, approved policies.

An unconfirmed option is not automatically excluded; it is shown as demo or assumption.

11. Technical Documentation

11.1 Stack

- Frontend: [framework / library]
- Backend / database: [TEAM TO FILL]
- File storage for uploads: [TEAM TO FILL]
- Authentication: [TEAM TO FILL]
- Hosting / demo URL: [TEAM TO FILL]

11.2 Data model (summary)

- **Service:** id, name (AR/EN), description, images, options, required info.
- **PortfolioItem:** id, category, image, caption, source/permission.
- **Request:** id, request number, service, specs (JSON), quantity, description, desired date, receipt preference, status, created at.
- **Customer contact:** name, phone/email (attached to request).
- **Attachment:** request id, file, type, size.
- **Message / Update:** request id, author, text, timestamp.
- **AdminUser:** id, credentials (hashed).

11.3 Setup

```
# 1. Clone
git clone [REPO URL]
cd [project]

# 2. Install
[install command]

# 3. Environment variables
cp .env.example .env   # fill in values

# 4. Run
[run command]
```

11.4 Folder structure

```
[TEAM TO FILL]
```

12. Pre-Presentation Test Plan

The brief asks teams to test four things before presenting.

#	Test	Steps	Expected	Result
1	A complete request reaches admin	Submit full request as customer	Appears in dashboard with all details and files	[ ]
2	Missing or inconsistent details are caught	Submit with size total mismatch and no print position	Readiness check flags both; cannot send until fixed	[ ]
3	Approval and rejection appear correctly	Approve one request, reject another	Customer tracking page shows decision and next step	[ ]
4	Files and access stay private	Open a request link or file as another user	Access denied	[ ]

Additional checks: mobile layout, RTL, reduced-motion fallback, logo at small size, all contact links work.

13. Handover Package

- **Brand files:** original and developed logo (if applicable), colour references, typography, the two social designs, editable and exported files.
- **Website files:** working demo, source files, setup notes, safe access to the demo dashboard.
- **Short walkthrough:** discover a product, submit a request, decide in admin, show the customer's next step, demonstrate the distinctive feature.

Suggested walkthrough script (about 3–5 minutes)

1. Home page and brand identity (10–20 s)
2. Browse a service and a portfolio item, then "use as reference" (30 s)
3. Start a request with a deliberate mistake; the readiness assistant flags it; fix it (60 s)
4. Send the request and receive the request number (15 s)
5. Admin: open the request, review details and files, approve or reject, send a message (60 s)
6. Customer: track the request and see the decision and next step (30 s)
7. Social designs and logo explanation (30 s)

14. Known Limitations and Future Work

- [TEAM TO FILL: what is demo-only, what needs client decisions or integrations for production]
- Payment, delivery and pricing are not implemented until confirmed with the client.

Appendix A – Sources from the Brief

1. Official company page (name, category, location, published contact channel)
2. Published identity assets (logo and cover artwork)
3. Published service announcement (clothing, caps, stickers, mugs, gifts, phone cases, custom designs)
4. T-shirt project and portfolio images

Source material was reviewed by the organiser on 22 October 2026.
